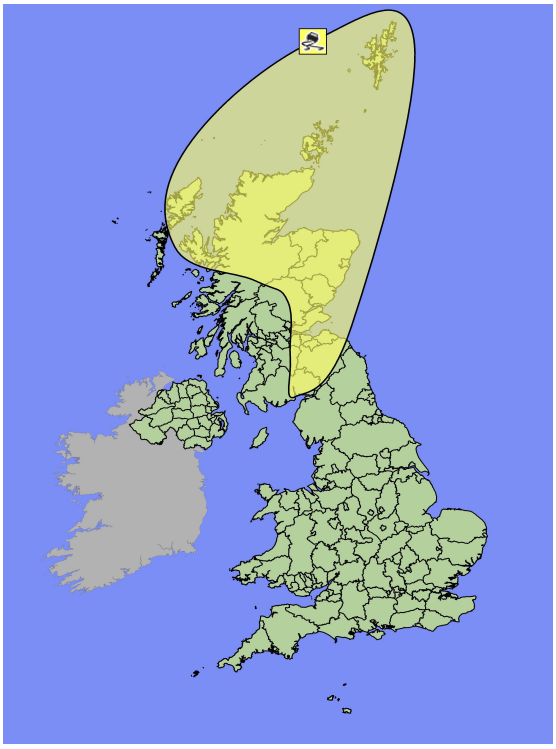
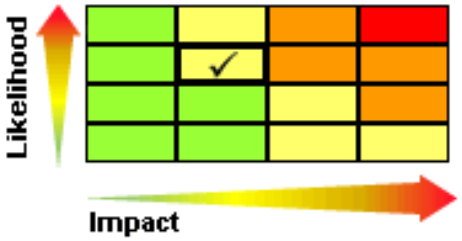
National Severe Weather Warning Service





Chief Forecasters Assessment
Snow showers will slowly die out this evening but daytime snowmelt will leave some surfaces wet, leading to the formation of ice on untreated roads and pavements.

Overnight, slightly less cold air will feed into northern Scotland such that the showers will turn more to rain or sleet at low levels whilst surface temperatures are below freezing, hence the added risk of ice.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **17:00 on Mon, 11th Mar 2013** until **10:00 on Tue, 12th Mar 2013**

Icy stretches will form on untreated surfaces still wet from melting snow on Monday afternoon across eastern Scotland. Showers will continue over northern Scotland overnight and into Tuesday. They will be be a mix of rain and sleet at low levels falling on frozen surfaces with a further ice risk.

In addition the showers continuing in the north will give localised accumulations of 2 to 5cm over higher ground inland.

The public should be aware of possible travel disruption.
